

KALIMBA

DriadeLab,

Kalimba, a name inspired by an ancient African percussion instrument, is the new outdoor table designed by DriadeLab, the company's research centre and creative heart. Aluminium table with a slatted effect top, eco-sustainable and durable, it is the perfect piece of furniture for any situation. Functional and minimalist, with clear geometric lines, designed to fit into any space and any type of garden or terrace. Versatile and light, available in three different sizes, it can also be used for contract projects, as a furnishing accessory on cruise ships and for beach clubs. In fact, aluminium is the only material that does not deteriorate or change due to external agents such as salt and iodine.

Kalimba is an outdoor table made entirely of extruded aluminum coated in white RAL 9010 polyester powder.

The top consists of a 2,4" high structural perimeter profile and 2,4"x0,7" section slats which, to avoid rainwater stagnation, are placed side by side at a distance of 0,23".

The table legs are made of extruded aluminum with a 2,4"x2,4" section with the internal part inclined.

The legs are also equipped with a particular adjustment system for leveling the table.
